

# Integration with Avigilon Control Center

AVIGILON™

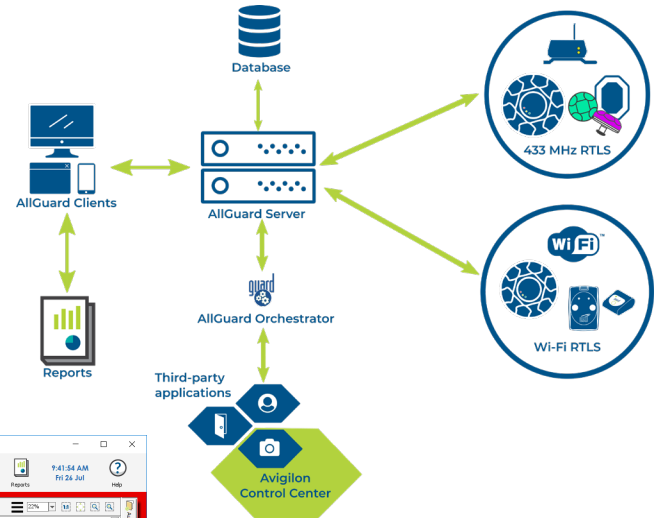

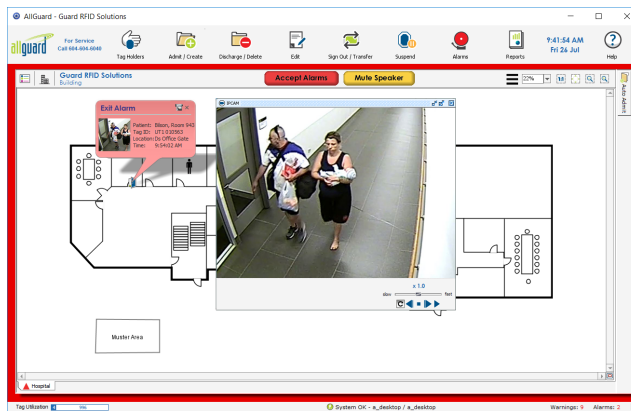

## FEATURES:

- Seamless integration with Avigilon Control Center video management software
- View video of AllGuard alarm events in either the AllGuard desktop client or the Avigilon Control Center client
- View live and recorded video of AllGuard events through Avigilon cameras
- Available in North America, Latin America, Europe, Middle East and Africa.

## INTEGRATION REQUIREMENTS:

## SOFTWARE LICENSES:

The **AllGuard®** application from GuardRFID® is a server-client enterprise system that works with GuardRFID tags, Tag Readers and Tag Exciters to provide you with a full featured real-time location tracking system. The Avigilon Control Center software integrates with the AllGuard software to provide video support.

The integration allows live video of AllGuard events to be displayed in the AllGuard desktop client, and the integration can be configured to record video of alarms.

If you prefer to monitor events through the Avigilon Control Center software, AllGuard events can be configured as third-party alarms so that video of all events can be monitored from the same platform.

### Compatible software versions

AllGuard Server	7.0.1 and later
AllGuard desktop client	7.0.1 and later
AllGuard Orchestrator	1.4.0 and later
Avigilon Control Center Server	7.4.2.2
Avigilon Control Center Client	7.4.2.2
