

# INTEGRATION SYSTEM C4

COMPLEX, MODERN, FLEXIBLE

C4 is a software solution for the complex management of building security. A revolutionary system that integrates several security technologies types. It interconnects devices from various world manufacturers into one complex solution. It is designated to everyone who wants to control, manage and be perfectly acquainted with the security status of the monitored area.

# C4 Integration with Avigilon ACC

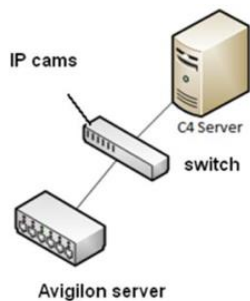

This integration (SW-CUAVI) allows users to watch live and recorded video from ACC. Playback is connected to all security devices in the system such as access authorization systems, electronic security devices, and electronic fire alarms.

The openness of the C4 system is an advantage when integrating the company information systems with connectors. These provide an interconnection with a company's personnel systems and identity servers, and its parking, attendance and other information systems.

The C4 system, with its monitoring module, can interconnect with geographic information systems, which can provide detailed information when dealing with crisis situations. A good example of this is the ability to display electrical installation, piping and air conditioning in an area in which the C4 system has detected a security alert. Data can be acquired online, upon request, from a GIS data server.

The C4 integrated security system communicates via a web services interface. This interface makes it possible to integrate various functionalities used in the C4 Client application via third party utilities and applications. For example, after receiving information about a truck's arrival, the system can control the ramp via a warehouse system.

This integration (SW-CUAVI) allows users to watch live and recorded video from ACC. Playback is connected to all security devices in the system such as access authorization systems, electronic security devices, and electronic fire alarms.

Supported/Compatible Versions: ACC5, ACC6, ACC7

Regional Availability Worldwide

# INSTALLATION GUIDE

## REQUIREMENTS

License Requirements	For every one device (e.g. camera) which is connected to ACC. But in the case, when you have camera with more streams (for example 8.0MPHD DOME-360) and encoder ENC-4P-H264, camera need one license in ACC, but in C4 there are 4 licenses needed (for every separate stream).
Supported Avigilon Versions and Editions	ACC5 or newer
Any Other Required Hardware/Devices	N/A
Minimum System Requirements	<ul style="list-style-type: none"><li>• Intel Core i5 or similar</li><li>• HDD: 60 GB</li><li>• RAM: 4 GB</li><li>Operating System: Windows 7 or newer (Starter a Home are not supported)</li><li>• Database: MS SQL 2008 Express or newer</li></ul>

## INSTALLATION

System Installation Requirements	Internet connection
